**DETAILED ACTION**

***Election/Restrictions***

1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-8, drawn to a system for automatically selecting a source based on two factors, one of which is an average time the content object will remain on a source, classified in class 709, subclass 219.
  - II. Claims 9, 10, and 13-21, drawn to a system for ranking (but not automatically selecting) transfer servers based at least on a churn rate, classified in class 711, subclass 119.
2. Inventions I and II are related as subcombinations disclosed as usable together in a single combination. The subcombinations are distinct from each other if they are shown to be separately usable. In the instant case, invention I has separate utility such as in a system where a churn rate (the number of users who discontinue use of a service over a given time divided by the average total number of users) is not calculated and where cache server selections are made automatically based on a preference that may not be the client preference specifically. See MPEP § 806.05(d).
3. During a telephone conversation with Melissa Haapala on 11/30/04 a provisional election was made without traverse to prosecute the invention of Group I, claims 1-8. Affirmation of this election must be made by applicant in replying to this Office action. Claims 9, 10, and 13-21 withdrawn from further consideration by the examiner, 37 CFR 1.142(b), as being drawn to a non-elected invention.
